UMAR KHAN MUHAMMAD

CYBER SECURITY GRADUATE | SOC AND CLOUD SECURITY | DEVOPS AND DEVSECOPS

Crawley / London, UK | 07455 549273 | umargreat2004@gmail.com

github.com/Khanu123 | khanu123.github.io

UK settled status | No sponsorship required | Willing to undergo UK government security clearance

PROFESSIONAL PROFILE

BSc Cyber Security (Hons, 2:1) graduate with penetration-testing experience and a practical portfolio spanning SOC analysis, SIEM detection, cloud security and DevSecOps. Builds tested Python tools, analyst reports and reproducible security labs using Splunk, Microsoft Sentinel, AWS and Azure technologies. Recent work includes a containerised SOC dashboard with GitHub Actions, Terraform infrastructure and verified recovery drills. Seeking junior cyber security, SOC, cloud or DevOps opportunities.

TECHNICAL SKILLS

SOC and detection: Alert triage, log analysis, incident response fundamentals, Splunk SPL, Sentinel KQL, MITRE ATT&CK, false-positive review and analyst playbooks.

Cloud and DevSecOps: AWS IAM, VPC, EC2, RDS, WAF, S3 and CloudWatch; Azure posture review; Docker, Terraform, GitHub Actions, OIDC and CI/CD lab workflows.

Security assessment: Nmap, Burp Suite, OpenVAS, Nikto, SQLMap, Robo Shadow, OWASP Top 10, CVSS, HTTP security headers and remediation reporting.

Automation and forensics: Python, pandas, scikit-learn, Isolation Forest, Random Forest, Wireshark, FTK Imager, Autopsy and Volatility.

IT and systems: Windows troubleshooting, Active Directory basics, Microsoft Office, device/scanner support, Git/GitHub, JSON/CSV handling and technical documentation.

PROFESSIONAL EXPERIENCE

Passenger Assistant Jul 2026 - Present

Wilson James | Gatwick Airport, UK

- Provide end-to-end assistance to passengers with physical, sensory, hidden and mobility-related disabilities, supporting departures from check-in through boarding and arrivals from aircraft through the terminal.
- Communicate calmly with passengers and airport teams, adapting support to individual needs while prioritising safety, dignity, punctuality and service quality in a fast-paced, safety-critical environment.

Penetration Tester Dec 2025 - May 2026

ITservicehub | Crawley, UK

- Performed authorised network and web-application vulnerability assessments using Robo Shadow and Nmap, documenting findings and evidence within the defined testing scope.
- Analysed 20 security alerts involving misconfigurations and missing HTTP security headers; assessed severity, filtered false positives and confirmed no known CVEs were present.
- Produced evidence-led reports with severity ratings, business context and prioritised remediation, including HTTPS enforcement, Content Security Policy (CSP) and HTTP Strict Transport Security (HSTS).

Lounge Host Jul 2023 - Sep 2023

No1 Lounges | Gatwick Airport, UK

- Delivered professional customer service in a fast-paced airport lounge, supporting guests, maintaining operational standards and strengthening communication, situational awareness and multitasking skills.

Additional Employment 2020 - 2025

Howdens Joinery / DHL / Dreams / The Best Connection / Mi Oud / Noshe / Chapati Junxion | UK

- Built reliability, teamwork, time management, health-and-safety awareness and customer-service skills across warehouse, retail and hospitality roles, including short-term and agency assignments.

SELECTED CYBER SECURITY AND DEVSECOPS PROJECTS

Portfolio: khanu123.github.io | Project titles link to their GitHub repositories.

DevOps Deployment Lab

- Containerised a read-only Python SOC dashboard with health checks, release metadata, structured logs and metrics; implemented OIDC release workflows, immutable image rollback and Terraform AWS infrastructure.
- Passed 20 Python tests, five Terraform mock checks, Linux container recovery checks and image/secret scan gates. Documented monitoring, runbooks and security tradeoffs; live AWS deployment remains pending.

Sentinel SOC Dashboard

- Converted 8 synthetic alerts into 5 prioritised cases with severity and SLA logic, MITRE mapping, analyst guidance and false-positive checks; produced HTML, CSV, JSON and Markdown reports with automated validation.

Insider Threat Detection Final Project

- Applied Isolation Forest and Random Forest workflows to 15 sanitised user sessions, prioritising 3 for analyst review; documented model behaviour, reproducible evidence, tests, ethics and limitations.

Splunk Detection Lab

- Created 3 detections for brute force, password spray and privileged external login; validated 12 synthetic events using 15-minute windows and event-order checks, with an analyst report, playbook and 9 tests.

Microsoft Sentinel SIEM Lab

- Authored 3 KQL detections for failed-then-success sign-ins, privileged geographic anomalies and encoded PowerShell; supplied analytic-rule metadata and validated sequencing with 9 synthetic records and 8 tests.

Cloud IAM Risk Analyzer

- Built a 9-control policy analyser covering wildcard access, iam:PassRole, public principals, MFA, ExternalId, NotAction and NotResource; produced severity-ranked remediation reports and 10 tests.

Azure Security Posture Reviewer

- Automated checks across Storage, NSGs, Key Vault, Public IPs, SQL and App Service; validated 12 representative findings with severity-ranked remediation and 10 tests.

Additional projects: Phishing Email Analyzer (safe .eml analysis, URL/header review, attachment hashes and 12 tests); vulnerability prioritisation using KEV/EPSS context; passive HTTP/TLS auditing and evidence-led security research.

EDUCATION

BSc Cyber Security (Hons), 2:1 | Anglia Ruskin University | Sep 2022 - Apr 2025

Relevant study: Ethical Hacking, Penetration Testing, Web Application Security, Digital Forensics and Cloud Security.

A-Levels | Hazelwick School | ICT (C), Business Studies (B), Photography (B) | Sep 2020 - Jun 2022

ACADEMIC CYBER SECURITY WORK

- Digital Forensic Investigation: analysed disk images and memory dumps with FTK Imager, Autopsy and Volatility to identify artefacts and suspicious activity.
- Enterprise-style Vulnerability Assessment and AWS Deployment: used Nmap, OpenVAS, Nikto and Hydra for assessment reporting; designed an AWS environment using IAM, VPC, EC2, RDS, WAF, CloudWatch and S3 controls.

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

AWS Cloud Technology Consultant (Certificate Earned) | Google Cybersecurity Professional Certificate | Microsoft Cybersecurity Analyst Professional Certificate | CompTIA A+ | Cisco Network Security

Current learning: AWS Cloud Technical Essentials (in progress) | TryHackMe | Hack The Box | threat-intelligence research | Forage cybersecurity simulations | continuous GitHub portfolio development
