UMAR KHAN MUHAMMAD

CYBER SECURITY ANALYST | SOC | SIEM | CLOUD SECURITY | AI/ML SECURITY ANALYTICS

Crawley / London, UK | 07455 549273 | **umargreat2004@gmail.com** | **GitHub** | **Portfolio**

UK settled status | No sponsorship required | Actively seeking Cyber Security / IT opportunities | Willing to undergo UK government security clearance

PROFESSIONAL PROFILE

ISC2 Certified in Cybersecurity (CC) and BSc Cyber Security (Hons, 2:1) graduate with hands-on experience across SOC/SIEM operations, cloud and IAM security, vulnerability assessment, IT systems, phishing analysis, digital forensics, and AI/ML security analytics. Built and documented defensive security projects using Splunk, Microsoft Sentinel, AWS, Azure, Python, pandas and scikit-learn, including detection engineering, alert triage, cloud posture review and behavioural anomaly detection. Previously worked as a Penetration Tester analysing live-system alerts and producing evidence-led remediation reports. Currently a Passenger Assistant with Wilson James at Gatwick Airport while continuing professional development in AWS cloud technologies.

CORE TECHNICAL SKILLS

Security Operations & SIEM: SOC alert triage, log analysis, incident response fundamentals, MITRE ATT&CK, Splunk SPL, Microsoft Sentinel KQL, detection validation, false-positive analysis, analyst playbooks

Cloud & Identity Security: AWS IAM, VPC, EC2, RDS, WAF, CloudWatch, S3, Azure security posture, least privilege, MFA, public-exposure analysis, conditional controls

IT & Systems: Windows troubleshooting, Active Directory basics, Microsoft Office, device/scanner support, Git/GitHub, JSON/CSV handling, structured technical documentation

Vulnerability & AppSec: Nmap, Burp Suite, OpenVAS, Nikto, SQLMap, Robo Shadow, OWASP Top 10, CVSS, CSP, HSTS, vulnerability prioritisation and remediation reporting

AI, Automation & Forensics: Python, pandas, scikit-learn, Isolation Forest, Random Forest, behavioural analytics, Wireshark, FTK Imager, Autopsy, Volatility

CYBERSECURITY HIGHLIGHTS

- 10 defensive cyber projects built and documented across SOC operations, SIEM, cloud security, IAM, phishing, vulnerability management, AppSec and AI/ML behavioural analytics.
- 6 tested SIEM detections created across Splunk SPL and Microsoft Sentinel KQL, including time-window and event-order validation.
- Practical cyber work combines detection engineering, cloud security, vulnerability assessment, digital forensics, Python automation and AI/ML security analytics.

PROFESSIONAL EXPERIENCE

Passenger Assistant — **Jul 2026 - Present**

Wilson James | Gatwick Airport, UK

- Provide end-to-end assistance to passengers with physical, sensory, hidden and mobility-related disabilities, supporting departures from check-in through boarding and arrivals from aircraft through the terminal.
- Communicate calmly with passengers and airport teams, adapting support to individual needs while prioritising safety, dignity, punctuality and service quality in a fast-paced, safety-critical environment.

Penetration Tester — **Dec 2025 - May 2026**

ITservicehub | Crawley, UK

- Performed authorised network and web-application vulnerability assessments using Robo Shadow and Nmap, documenting findings and evidence within the defined testing scope.
- Analysed 20 security alerts involving misconfigurations and missing HTTP security headers; assessed severity, filtered false positives and confirmed no known CVEs were present.
- Produced evidence-led reports with severity ratings, business context and prioritised remediation, including HTTPS enforcement, Content Security Policy (CSP) and HTTP Strict Transport Security (HSTS).

Lounge Host — **Jul 2023 - Sep 2023**

No1 Lounges | Gatwick Airport, UK

- Delivered professional customer service in a fast-paced airport lounge, supporting guests, maintaining operational standards and strengthening communication, situational awareness and multitasking skills.

Additional Employment — **2020 - 2025**

Howdens Joinery / DHL / Dreams / The Best Connection / Mi Oud / Noshe / Chapati Junxion | UK

- Built reliability, teamwork, time management, health-and-safety awareness and customer-service skills across warehouse, retail and hospitality roles, including short-term and agency assignments.

SELECTED CYBERSECURITY PROJECTS

Sentinel SOC Dashboard | Python | MITRE ATT&CK | SOC triage | GitHub Actions
- Built a triage engine that converted 8 synthetic alerts into 5 prioritised cases with MITRE mapping, SLA logic, false-positive guidance, secure HTML/CSV/JSON/Markdown outputs and 9 unit tests.

Microsoft Sentinel SIEM Lab | KQL | Analytic rules | Identity & endpoint detections
- Authored 3 KQL detections with matching rule metadata for failed-then-success sign-ins, privileged geographic anomalies and encoded PowerShell; validated sequencing with 9 synthetic records and 8 tests.

Splunk Detection Lab | Splunk SPL | Authentication abuse | Python validation
- Created 3 SPL detections for brute force, password spray and privileged external login; validated 12 synthetic events using 15-minute windows, ordering checks, an analyst report, playbook and 9 tests.

Insider Threat Detection Final Project | Python | pandas | scikit-learn | AI/ML behavioural analytics
- Developed AI/ML security workflows using Isolation Forest and Random Forest that scored 15 sanitised user sessions, prioritised 3 for analyst review and generated reproducible evidence, model documentation, ethics guidance and tests.

Cloud IAM Risk Analyzer | AWS IAM | Python | Least privilege
- Developed a 9-control policy analyser covering wildcard access, iam:PassRole, public principals, MFA and ExternalId conditions, NotAction and NotResource; added severity-ranked reporting and 10 tests.

Azure Security Posture Reviewer | Azure | Python | Cloud misconfiguration
- Built automated checks across Storage, NSGs, Key Vault, Public IPs, SQL and App Service; validated 12 representative resource findings with severity-ranked remediation and 10 tests.

Phishing Email Analyzer | Email security | Python | Safe artefact extraction
- Created a safe .eml analysis workflow for headers, authentication results, URLs and attachment hashes; added structured risk indicators, analyst-oriented output and 12 tests.

Additional GitHub Portfolio | Vulnerability Management | AppSec | Security Research
- Additional repositories cover explainable KEV/EPSS-informed vulnerability ranking, passive HTTP/TLS auditing and evidence-led analyst case studies with automated tests and documented workflows.

ACADEMIC CYBERSECURITY WORK

- Digital Forensic Investigation: analysed disk images and memory dumps with FTK Imager, Autopsy and Volatility to identify artefacts and suspicious activity.
- Enterprise-style Vulnerability Assessment and AWS Deployment: used Nmap, OpenVAS, Nikto and Hydra for assessment reporting; designed an AWS environment using IAM, VPC, EC2, RDS, WAF, CloudWatch and S3 controls.

EDUCATION

BSc Cyber Security (Hons), 2:1 | Anglia Ruskin University | Sep 2022 - Apr 2025
Relevant study: Ethical Hacking, Penetration Testing, Web Application Security, Digital Forensics and Cloud Security.

A-Levels | Hazelwick School | ICT (C), Business Studies (B), Photography (B) | Sep 2020 - Jun 2022

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

ISC2 Certified in Cybersecurity (CC) | AWS Cloud Technology Consultant (Certificate Earned) | Google Cybersecurity Professional Certificate | Microsoft Cybersecurity Analyst Professional Certificate | CompTIA A+ | Cisco Network Security

Current learning: AWS Cloud Technical Essentials (in progress) | TryHackMe | Hack The Box | threat-intelligence research | Forage cybersecurity simulations | continuous GitHub portfolio development
