

Umar Khan Muhammad

Crawley, UK | 07455 549273 | umargreat2004@gmail.com | github.com/Khanu123 | khanu123.github.io

PROFESSIONAL PROFILE

Cyber Security graduate (BSc Hons, 2:1 - Anglia Ruskin University) seeking SOC Analyst, Junior Cyber Security, or Security Operations roles. Hands-on experience in vulnerability assessment, alert triage, digital forensics, AWS security concepts, and Python security tooling. Built a professional GitHub portfolio covering SOC case prioritisation, IAM risk analysis, phishing investigation, vulnerability prioritisation, and web security posture review. Comfortable translating technical findings into clear risk ratings, remediation actions, and stakeholder-ready reports.

CORE TECHNICAL SKILLS

Security Operations	Alert triage, incident response concepts, MITRE ATTACK framework, SOC workflows, risk severity assessment, SIEM/EDR concepts, security reporting
Cyber Tools	Nmap, Burp Suite, OpenVAS, Nikto, SQLMap, Metasploit, Hydra, Hashcat, Wireshark, Robo Shadow
Cloud & Web Security	AWS IAM, VPC, EC2, RDS, WAF, CloudWatch, S3, OWASP Top 10, HTTP security headers, CSP, HSTS
Forensics	FTK Imager, Autopsy, Volatility, disk image analysis, memory artefact review, malware persistence concepts
Scripting & IT	Python, Bash basics, JSON/CSV parsing, log analysis, Active Directory basics, Windows troubleshooting, Git/GitHub

PROFESSIONAL EXPERIENCE

Penetration Tester - ITservicehub | Training Contract | Dec 2025 - Present

- Performed network and web application vulnerability scans on live systems using Robo Shadow and Nmap.
- Identified and analysed 20 security alerts relating to misconfigurations and missing HTTP security headers, confirming no known CVEs were present.
- Assessed severity and false positives; recommended practical remediations including HTTPS enforcement, CSP, and HSTS implementation.
- Produced professional security reports documenting findings, risk ratings, and prioritised remediation steps for stakeholder review.

Warehouse Operative - Howdens Joinery / DHL / Dreams (Agency) | May 2025 - Oct 2025

- Operated in fast-moving, process-driven environments requiring strict procedure-following, time management, reliability, and performance under pressure.

Waiter - Noshe | Sep 2024 - Oct 2024

- Developed clear communication, composure, and the ability to manage competing priorities in a customer-facing environment.

SELECTED CYBERSECURITY PROJECTS

Sentinel SOC Dashboard | Python, SOC triage, MITRE ATTACK, CI

Built an alert triage tool that groups security alerts into analyst cases, scores priority using severity/volume/tactic diversity, maps MITRE context, and exports HTML, CSV, JSON, and Markdown reports. Includes tests, GitHub Actions, case study, architecture docs, and interview notes.

Cloud IAM Risk Analyzer | Python, AWS IAM, least privilege

Created an IAM policy review tool that flags wildcard actions/resources, risky iam:PassRole, public principals, missing MFA conditions, and sensitive permissions without controls. Produces remediation-focused Markdown risk reports.

Phishing Email Analyzer | Python, email security, SOC investigation

Developed an .eml analysis tool for suspicious URLs, SPF/DKIM/DMARC failures, sender/reply-to/return-path mismatch, urgency language, risky attachments, risk scoring, and analyst-ready reporting.

Vulnerability Intelligence Prioritizer | Python, CVSS, risk scoring

Built a vulnerability management tool that prioritises CVEs using CVSS, known exploitation, internet exposure, and asset criticality, then assigns remediation SLAs.

Web Security Posture Auditor | Python, AppSec, security headers

Created a passive auditor for HTTPS and common security headers including HSTS, CSP, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, and server version disclosure.

ACADEMIC CYBER SECURITY PROJECTS

Ethical Hacking Lab Portfolio | Sep - Dec 2024

Completed 12+ practical labs covering reconnaissance, scanning, exploitation concepts, privilege escalation, and reporting.

Digital Forensic Investigation | Sep - Dec 2024

Analysed disk images and memory dumps using FTK Imager, Autopsy, and Volatility to identify artefacts and suspicious activity.

Penetration Testing & Vulnerability Assessment - Dead Duck Publishing | Sep - Dec 2024

Conducted an enterprise-style assessment using Nmap, OpenVAS, Nikto, and Hydra; documented findings and remediation priorities.

AWS Secure Web Application Deployment | Jan - Apr 2024

Designed a secure AWS environment using IAM, VPC, EC2, RDS, WAF, CloudWatch, and S3 security concepts.

EDUCATION

BSc Cyber Security (Hons), 2:1 - Anglia Ruskin University | Sep 2022 - Apr 2025

A-Levels - Hazelwick School | ICT (C), Business Studies (B), Photography (B) | Sep 2020 - Jun 2022

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Google Cybersecurity Professional Certificate | Microsoft Cybersecurity Analyst | CompTIA A+ | Cisco Network Security

Active CTF competitor | TryHackMe / Hack The Box | Threat intelligence research | Continuous GitHub portfolio development
